

Construction Site Manager

A mobile solution designed to quickly and securely provide positive ID onsite and track activity of documented personnel and visitors at a construction site.

The Construction Site Manager Solution (CSMS) is a software program designed to provide accountability and security to job sites by identifying and tracking documented workers and visitors on-site. Identify, authenticate, track and report on all personnel at a job site with a system that meets the requirements of tracking documented workers. Provide secure photo IDs on-site for every employee and subcontractor to wear at a job site at all times. Track employee time spent at a job site and keep accurate records for accounting purposes.

Construction Site Manager can be integrated with companion products to provide added functionality and features to the CSMS system. Construction companies or general contractors have the flexibility to build their solution using these tools to meet their specific needs. When integrated with companion products, CSMS allows you to:

- Share personnel & visitor information gathered from multiple locations.
- Easily scan credentials at each entrance/exit and track workers without immediate supervision.
- Track and manage assets as well as assign assets to people.
- Track information on assets that require maintenance.
- Easily transport a mobile workstation to identify and track personnel on- and off-site.
- Wirelessly transmit data in real-time using handheld devices.
- Backup data with a simple one click process.
- Form groups and search for specialties or assets.

Positive Identification

1. AMS provides both a stand alone or networkable solution that can quickly capture a driver's license or state issued ID, then populate a database.
2. A secure ID is produced on a high quality plastic card.
3. Credentials are presented for checking in/out at any entrance/exit. Accountability Manager allows you to scan a card and immediately track who is onsite, their purpose, location, and time spent on-site.

CSMS Features

- > View and access information remotely through web access.
- > Track documented personnel and track time spent on-site.
- > Generate accurate reports on employee data and activity for greater accountability.
- > Quickly capture data from a driver's license or state issued ID to produce temporary or permanent ID for visitors and workers.
- > Track safety tests, contact information, skills and certifications.
- > Attach I9's and other pertinent documents.
- > Select from multiple card designs.

Construction Site Manager

Companion Products

The Construction Site Manager software can be integrated with other hardware and software products to enhance the solution and build a more comprehensive system resulting in greater effectiveness and success.

Mobile Command Cases

- The Mobile Command Case is a turn-key, integrated solution packaged as a compact, self contained workstation. This case is designed to quickly be transported and setup with little to no preparation.
- Available as a standard or mini command case.
 - Protected by a durable, water tight mobile case.
 - Track people away from the command workstation.

Easily transport to multiple locations with little to no preparation!

Data Server

- Remotely synchronize your Command Center with the Data Server.
- Doubles as a backup for data recovery.
- Synchronize and share data with many Command Centers.
- Tailor options of access to other Command Centers.

Mobile Tracking Devices

- Track personnel away from the command workstation.
- Wirelessly connect to the command workstation by transmitting data in real-time.
- Manage multiple entry and exit points at a site.
- Add multiple applications to each device.
- Search a personnel database.

Stationary Tracking Devices

- Quickly capture data from a driver's license or state issued ID.
- Scan an ID to log in a person at a job site.
- Capture data stored on a 1- or 2-D barcode or magstripe ID.
- Scan personnel in and out on-site without immediate supervision.

Asset Manager Solution

- Tracks products by grant, department & purchase date.
- Track information on items that require maintenance.
- Generate asset reports for accountability of state and federal grant purchases.
- Associate assets using a parent/child category relationship.
- Use a handheld device for quick & easy inventory tracking.
- Assign assets to people.

ID Badging System

- Multiple security features available.
- Increased durability with virtual edge-to-edge laminates.
- Instantly issue quality IDs.
- Include color photos, logos & background images on IDs.
- Theft-deterrent software and hardware lock system.

IDPix 1000 Professional

- One click photo capture & auto cropping.
- Quickly capture high quality photos.
- Cable management.
- Ability to integrate with multiple cameras & software.
- Reliable, consistent performance.
- Streamlined design & function controls.

Additional Features

- > Accurately track work hours for payment.
- > Portable equipment allows a quick setup.
- > Produce accountability reports.
- > Efficiently search for obtainable assets or skilled professionals.
- > Easily share information with corporate headquarters while on-site.
- > Auto notification of assignment duration limit, expired IDs or certifications.
- > Send mass messages via e-mail to a group of people with the ability to schedule reoccurring messages and send a report.
